CMIE ProwessIQ Prowess for Interactive Querying
Most Comprehensive Database on Indian Companies

Financial performance of 38,210 companies

About ProwessIQ

ProwessIQ, or Prowess for Interactive Querying, is a powerful internet-based application for querying CMIE's database on performances of listed and unlisted companies. It is simple and easy to use.

ProwessIQ provides charting tools and well-formatted reports on performances of companies. The reports provide financial information including analytical ratios and benchmark comparisons.

Downloads of source documents interim results, ratings rationales and annual report extracts are part of the service.

CMIE launches ProwessIQ

CMIE's on-going efforts to evolve its products to make them more and more user-friendly and technologically superior resulted in the development of the internet-based version of its classic desktop-based Prowess installation. This internet-based version is christened Prowess for Interactive Querying, or Prowess IQ.

The development of ProwessIQ is in response to a long standing demand of avid Prowess users to port the database from the desktop to the internet without giving up the querying power of the application. This indeed was a tough task. In response, CMIE first moved the database to the Web and launched PACE, or Prowess Application for Credit Evaluation. The application was found most useful by banks where all information on companies was just a click away.

Having successfully ported the Prowess database to the Web, CMIE moved on to make the web-based data queriable. After a long and strenuous haul, CMIE has now released ProwessIQ, which enables users to simply login through the internet and access information and query on the most comprehensive and ever-expanding database on financial performance of Indian companies.

ProwessIQ provides information on a far greater number of companies than the traditional Prowess desktop application. It also provides far more information on a company. It is free of installation and updation hassles and is accessible by
